## Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

### 1. Statement

Novelty (N)	Claims	1 ~ 4	YES
	Claims	None	NO
Inventive step (IS)	Claims	1 ~ 4	YES
	Claims	None	NO
Industrial applicability (IA)	Claims	1 ~ 4	YES
	Claims	None	NO

### 2. Citations and explanations (Rule 70.7)

Reference is made to the following document :

D1 : US 6584505 B1 (Microsoft Corp.) 24 June 2003  
( see abstract, figure 1, claims 1, 17, 27 )

D2 : US 6519647 B1 (Microsoft Corp.) 11 February 2003  
( see abstract, figure 6, claim 1, 10, 17, 23 )

Claims 1~4 of the present application relate to an apparatus for extranet access control, wherein a domain web server examines the authorization status of each domain by using ACL(access control list), then AA(authentication and authorization) server authenticates and authorizes the encrypted role information cookie which is generated from the domain web server, then the authorization information storage module saves ACL and ACE(access control entry).

On the other hand, the prior art D1 discloses a method for granting access to a network server by granting or denying access to the user according to whether the user is authenticated or not and the prior art D2 discloses a method for synchronizing access control in a web server wherein one or more of the security settings for one or more of the access control mechanisms are set when a security scenario is selected.

But none of the above documents teach or fairly suggest the feature of present invention that comprises a domain web server, authentication and authorization server, and a authorization information storage module.

It is thus believed that claims 1~4 meet the criteria set out in PCT Article 33(2)-(4)
